—The MAILING DATE of this communication appears on the cover sheet beneath the correspondence address—

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, such period shall, by default, expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).

## Status

- ☒ Responsive to communication(s) filed on 11/30/2000
- ☒ This action is **FINAL**.
- ☐ Since this application is in condition for allowance except for formal matters, **prosecution as to the merits is closed** in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11; 453 O.G. 213.

## Disposition of Claims

- ☒ Claim(s) 1-8 is/are pending in the application.
- Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- ☒ Claim(s) 1-8 is/are rejected.
- ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- ☐ Claim(s) \_\_\_\_\_ are subject to restriction or election requirement.

## Application Papers

- ☐ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.
- ☐ The proposed drawing correction, filed on \_\_\_\_\_ is ☐ approved ☐ disapproved.
- ☐ The drawing(s) filed on \_\_\_\_\_ is/are objected to by the Examiner.
- ☐ The specification is objected to by the Examiner.
- ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. § 119 (a)-(d)

- ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).
- ☒ All ☐ Some\* ☐ None of the CERTIFIED copies of the priority documents have been received.
- ☐ received in Application No. (Series Code/Serial Number) \_\_\_\_\_
- ☐ received in this national stage application from the International Bureau (PCT Rule 1.7.2(a)).

\*Certified copies not received: \_\_\_\_\_

  
DOV POPOVICI  
PRIMARY EXAMINER

## Attachment(s)

- ☐ Information Disclosure Statement(s), PTO-1449, Paper No(s). \_\_\_\_\_
- ☐ Interview Summary, PTO-413
- ☐ Notice of Reference(s) Cited, PTO-892
- ☐ Notice of Informal Patent Application, PTO-152
- ☐ Notice of Draftsperson's Patent Drawing Review, PTO-948
- ☐ Other \_\_\_\_\_

- Office Action Summary

Art Unit: 2622

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Notermans et al (U.S. 4,843,571) in view of Collard et al (U.S. 5,825,988).

As to claim 1, Notermans et al discloses a network print system comprising: a computer terminal (1) having, a processor (inherently), a computer user interface (4), and a computer display (5), the processor being configured to produce a print request message in response to information provided through the computer user interface (4), the print request message containing image data, and the print request message not uniquely identifying a device for printing the image data; at least one printer (3) communicatively coupled to the computer terminal (1), the at least one printer (3) having a printer user interface (8) with a data input device (13) and a data display device (14); and a host computer (2 and 6) communicatively coupled to the at least

Art Unit: 2622

one printer (3) and the computer terminal (1) and configured to receive the print request message, the host computer (2 and 6) having a memory (6) in which the image data is stored, and a host computer processor (2) configured to produce a identity code associated with the print request message and send the identity code to the computer terminal (1), wherein the computer terminal (1) being configured to display on the display (5) an indication of the identity code provided by the host computer (2 and 6), the host computer (2 and 6) being configured to recognize when the identity code is input to a particular printer of the at least one printer (3) via the printer user interface (8) and configured to, based on the identity code input, associate the particular printer with the print request message and identify the particular printer (3) as the printer for receiving the print request message, and provide the image data to the identified particular printer (3) for printing. Notermans et al does not teach wherein the identity code is a job number. Collard et al teaches a network print system wherein stored data files are not printed until a go-ahead print command is received, wherein the go-ahead print command is a name of the data file; (see column 10, lines 30-60). Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention

Art Unit: 2622

was made to have modified Notermans et al wherein: the identity code is a job number. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Notermans et al by the teaching of Collard et al because (1) for the reasons taught by Collard et al at column 1, lines 20-55 and (2) so that the user identity code can be the job number of the job that the user wants to print.

As to claim 2, Notermans et al does not teach wherein the identity code is a job number and a computer user interface configured to receive a password entered by a user, the processor being configured to produce a print request message containing image data and the password, the host computer having a memory in which the image data and the password are stored, a host computer processor produces a job number and stores the job number in the memory in association with the image data and password and the host processor being configured to recognize when the job number and password are input to a particular printer of the at least one printer via the printer user interface and configured to, based on the job number input, associate the particular printer with the print request message and identify the particular printer as the printer for receiving the print request message and provide the image data to the identified particular printer

Art Unit: 2622

for printing. Collard et al teaches a network print system wherein stored data files are not printed until a go-ahead print command is received, wherein the go-ahead print command is a name of the data file and a computer user interface configured to receive a password entered by a user, the processor being configured to produce a print request message containing image data and the password, the host computer having a memory in which the image data and the password are stored, a host computer processor produces a job number and stores the job number in the memory in association with the image data and password and the host processor being configured to recognize when the job number and password are input to a particular printer of the at least one printer via the printer user interface and configured to, based on the job number input, associate the particular printer with the print request message and identify the particular printer as the printer for receiving the print request message and provide the image data to the identified particular printer for printing (see column 10, lines 30-60). Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Notermans et al wherein the identity code is a job number and a computer user interface configured to receive a password entered by a user, the

Art Unit: 2622

processor being configured to produce a print request message containing image data and the password, the host computer having a memory in which the image data and the password are stored, a host computer processor produces a job number and stores the job number in the memory in association with the image data and password and the host processor being configured to recognize when the job number and password are input to a particular printer of the at least one printer via the printer user interface and configured to, based on the job number input, associate the particular printer with the print request message and identify the particular printer as the printer for receiving the print request message and provide the image data to the identified particular printer for printing. It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Notermans et al by the teaching of Collard et al because (1) for the reasons taught by Collard et al at column 1, lines 20-55; (2) so that the user identity code can be the job number of the job that the user wants to print; (3) the password can be provided for extra security and making sure that the right user will receive his print job. As for the rest of the claimed subject matter,

Art Unit: 2622

applicant is directed to the remarks and the discussion made in claim 1 above.

As to claim 3, Notermans et al discloses a printer memory (print queue) configured to hold a user identity code, at least one of the host computer (2 and 6) and the at least one printer (3) being configured to determine if an input data input through the printer user interface (8) of a particular printer of the at least one printer matches the identity code, and if so, to associate the particular printer with the print request message, identify the particular printer as the printer for receiving the print request message and provide the image data to the particular printer (3), the at least one printer (3) being configured to determine whether a identity code input via the printer user interface (8) matches the identity code stored in the printer memory and if so printing a document corresponding to the image data; (see column 5, lines 10-26). As for the rest of the claimed subject matter, applicant is directed to the remarks and the discussion made in claim 2 above.

As to claims 4-5, Notermans et al as modified discloses a secure method for printing a document in a network print system. The steps of claims 4-5 are similar to the network print system of claim 1, and are therefore similarly rejected.

Art Unit: 2622

As to claim 6, Notermans et al as modified discloses a secure method for printing a document in a network print system. The steps of claim 6 are similar to the network print system of claim 2, and is therefore similarly rejected.

As to claim 7, Notermans et al as modified discloses a secure method for printing a document in a network print system. The steps of claim 7 are similar to the network print system of claim 3, and is therefore similarly rejected.

As to claim 8, Notermans et al as modified discloses a secure network print system. The means plus functions of claim 8 are similar to the network print system of claim 1, and is therefore similarly rejected.

### ***Response to Arguments***

3. Applicant's arguments filed 11/30/2000 have been fully considered but they are not persuasive.

Applicant arguments stated and presented on page 8, line 1, to page 9, line 11, in the Amendment, filed on 11/30/2000, have been fully considered, but they are not found to be persuasive because of the following reason(s):

Art Unit: 2622

(1) The claimed recitation of "a particular printer of said at least one printer" and the claimed recitation of "said host processor being configured to recognize when said job number is input to a particular printer of said at least one printer via said printer user interface and configured to, based on said job number input, associate said particular printer with said print request message and identify the particular printer as the printer for receiving the print request message, and provide said image data to said identified particular printer for printing", the claimed printer, reads on printer (3) disclosed by Notermans et al, since only one printer is being claimed in the claims.

(2) Notermans et al discloses a network print system comprising: a computer terminal (1) having, a processor (inherently), a computer user interface (4), and a computer display (5), the processor being configured to produce a print request message in response to information provided through the computer user interface (4), the print request message containing image data, and the print request message not uniquely identifying a device for printing the image data; at least one printer (3) communicatively coupled to the computer terminal (1), the at least one printer (3) having a printer user interface (8)

Art Unit: 2622

with a data input device (13) and a data display device (14); and a host computer (2 and 6) communicatively coupled to the at least one printer (3) and the computer terminal (1) and configured to receive the print request message, the host computer (2 and 6) having a memory (6) in which the image data is stored, and a host computer processor (2) configured to produce a identity code associated with the print request message and send the identity code to the computer terminal (1), wherein the computer terminal (1) being configured to display on the display (5) an indication of the identity code provided by the host computer (2 and 6), the host computer (2 and 6) being configured to recognize when the identity code is input to a particular printer of the at least one printer (3) via the printer user interface (8) and configured to, based on the identity code input, associate the particular printer with the print request message and identify the particular printer (3) as the printer for receiving the print request message, and provide the image data to the identified particular printer (3) for printing.

Notermans et al does not teach wherein the identity code is a job number.

Collard et al teaches a network print system wherein stored data files are not printed until a go-ahead print command is

Art Unit: 2622

received, wherein the go-ahead print command is a name of the data file; (see column 10, lines 30-60).

Therefore, it would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Notermans et al wherein: the identity code is a job number.

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Notermans et al by the teaching of Collard et al because (1) for the reasons taught by Collard et al at column 1, lines 20-55 and (2) so that the user identity code can be the job number of the job that the user wants to print.

### **Conclusion**

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened

Art Unit: 2622

statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dov Popovici whose telephone number is (703) 305-3830.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks  
Washington, DC 20231

or faxed to:

(703) 308-9051 (for formal communications intended for entry)

(703) 306-5406 (for informal or draft communications, such as proposed amendments to be discussed at an interview; please label such communications "PROPOSED" or "DRAFT")
